

February 27, 2015

The Honorable William Shuster
Chairman, Transportation and Infrastructure
Committee
United States House of Representatives
Washington, DC 20515

The Honorable Peter A. DeFazio
Ranking Member, Transportation and
Infrastructure Committee
United States House of Representatives
Washington, DC 20515

The Honorable James Inhofe
Chair, Committee on Environment and Public
Works
United States Senate
Washington, DC 20510

The Honorable Barbara Boxer
Ranking Member, Committee on Environment
and Public Works
United States Senate
Washington, DC 20510

The Honorable John Thune
Chair, Committee on Commerce, Science and
Transportation
United States Senate
Washington, DC 20510

The Honorable Bill Nelson
Ranking Member, Committee on Commerce,
Science and Transportation
United States Senate
Washington, DC 20510

Dear Chairman Inhofe, Chair Shuster, Chair Thune, Ranking Member Boxer, Ranking Member DeFazio, and Ranking Member Nelson,

As you consider authorization bills for surface transportation, the undersigned groups encourage you to boost funding for the Bureau of Transportation Statistics (BTS) to the level requested under the President's FY16 Budget of \$29 million with inflationary increases for the out-years. The BTS budget has been stagnant for the past ten years. Indeed, its FY15 budget is the same as the FY05 budget, \$26 million, thereby eroding BTS of 20 percent of its purchasing power. (See attached graph.)

Increased BTS funding will deliver high returns by informing transportation policy in ways that can make transportation spending and service delivery more cost-effective, and boost private sector performance and economic growth.

Transportation is integral to our economy and country, from households to businesses to government. It makes up 16 percent of consumer spending. Large corporations and small businesses alike rely on our nation's transportation infrastructure for its personnel, clients and customers and the delivery and distribution of products and supplies. Similarly, state, local and federal governments rely on the transportation infrastructure for safety, economic development, delivery of services, and workforce access.

Given the importance of transportation to our economy and our country, understanding our transportation infrastructure is imperative. The BTS is the principal source of timely, accurate and objective information on the current state, safety, and performance of highway, rail, air, maritime, and pipeline transportation systems. Local, state and national policymakers, businesses, the agricultural sector, regulators, and other transportation users rely upon BTS data for planning, investment, business location, and other important decisions. BTS data are also critical in price determination for any manufactured, agricultural, or food good that is routinely transported over large distances and by different modes. As the value of goods per

pound increases, and the value of time for both people and goods grow, we will need an even more responsive transportation system to be effective competitors at home and abroad.

The recent National Research Council (NRC) study on transportation data requirements, Special Report 304, states:

Transportation decision makers face a complex, changing, and uncertain environment, yet the essential data for supporting transportation operations, policy, and investment decisions at all governmental levels and in the private sector are fragmented and incomplete in coverage and detail, lack timeliness, and are poorly integrated for analysis of current and emerging issues.

As a result of BTS's constrained budget, the intercity passenger travel survey has not been done since 1995 and the vehicle and inventory and use survey since 2002. The FY16 request for the BTS includes both these important surveys. It also proposes the development of strategies for measuring long-distance travel from a variety of other sources including other surveys, administrative records, and emerging data sources. Funding the FY16 request would provide up-to-date data to inform safety risk exposure, infrastructure performance, emissions, and economic performance.

We understand the difficult fiscal environment but urge you to consider the immense potential returns on this modest funding boost for the BTS.

Please direct any questions on this letter to Steve Pierson, Director of Science Policy for the American Statistical Association: pierson@amstat.org; 703.302.1841.

Thank you for your consideration.

Enclosure: Chart of FY03-FY15 budgets for mid-size federal statistical agencies

Mid-Size Federal Statistical Agencies

The budgets of the seven mid-sized statistical agencies normalized to their FY03 levels, along with the GDP deflator to account for inflation. The Social Security Administration Office of Research, Evaluation, and Statistics' budget is normalized (and adjusted for inflation) to its FY08 level, when the current accounting scheme was implemented. SOI's FY13 dip is due partially to a budget adjustment. (Figure 1 adapted from <http://magazine.amstat.org/blog/2014/03/01/science-policy-03-2014/>.)
