

There are 7 examples :

- income
- twoway
- twowayadditive
- wine
- litters
- rats
- ratsplus.

For most examples, there is a data file ending in the suffix “data”, a file containing models and inits ending in suffix “model” or “models”, and a file containing results from OpenBUGS ending in suffix “results” and with extension .odc. I have added some comments in the models files and also in the results files. There are also examples of prediction. Of course, the best way to get the most out of these examples is to run them and modify them to gain more experience. Enjoy!
