

August 4, 2017

The Honorable John Culberson  
Chairman  
House Appropriations Subcommittee on  
Commerce, Justice, and Science  
Washington, DC 20515

The Honorable José Serrano  
Ranking Member  
House Appropriations Subcommittee on  
Commerce, Justice, and Science  
Washington, DC 20515

The Honorable Richard Shelby  
Chairman  
Senate Appropriations Subcommittee on  
Commerce, Justice, and Science  
Washington, DC 20510

The Honorable Jeanne Shaheen  
Ranking Member  
Senate Appropriations Subcommittee on  
Commerce, Justice, and Science  
Washington, DC 20510

Dear Chairman Culberson, Ranking Member Serrano, Chairman Shelby, and Ranking Member Shaheen,

As you begin to conference the FY18 CJS appropriations bill, we the undersigned organizations write to urge you to support ongoing forensic science research and standards development efforts overseen by the National Institutes of Standards and Technology (NIST). We appreciate the support of the Senate appropriations committee for NIST forensic science work in FY18 and respectfully request its position be adopted in the final FY18 budget.

As emphasized in the National Academies report, *Strengthening Forensic Science in the United States: A Path Forward* (2009), and at subsequent congressional hearings, the integrity of our criminal justice system depends crucially on strong underlying scientific support of forensic science disciplines. The entire forensic community benefits from better coordination among law enforcement, legal professionals, forensic science practitioners, and scientists.

NIST is the lead scientific agency for much of the federal government's efforts to conduct research and coordinate scientific practice and standards, across many fields of science. With respect to criminal justice and law enforcement, the National Institute of Justice also serves an important role in funding scientific research.

We respectfully request you reject the administration's proposal to cut NIST forensic science research and reform work. Because of its strong historical leadership, NIST withdrawal from its leading role would be a devastating setback to the government's forensic science activities. The Center of Excellence devoted to forensic science complements internal research at NIST and extramural research supported by the Department of Justice to strengthen the science underlying analysis and interpretation of forensic evidence. We also request full support for technical merit evaluations and the Organization of Science Area Committees (OSAC) for Forensic Science overseen by NIST. OSAC brings together practitioners (from a wide range of agencies and organizations), scientists and legal professionals to develop standards and best practice guidelines in each forensic discipline. The technical merit evaluations ensure the accuracy of forensic science tests and procedures while assessing the capabilities and limitations of the methods.

Thanks to NIST's work and that of others, much progress has been made to bolster forensic science research and standards. We respectfully request the continued support.

Thank you for your consideration.
